Summary

Full-stack developer who owns features end to end - from **Angular, .NET, and SQL Server** dashboards and APIs through design, development, testing, and deployment. Experienced in delivering an **agentic web automation system**, a hybrid **LSTM + LLM forecasting engine**, and production-grade research platforms actively used by real-world teams. Comfortable working in **Agile**, cross-functional environments, partnering with stakeholders across teams, and communicating technical ideas clearly to both technical and non-technical audiences. Experienced with **AWS** cloud technologies, **CI/CD pipelines**, and a consistent focus on writing clean, well-documented, and maintainable code.

Experience

Jr. Software Developer, Aeyesafe (Remote - U.S.)

July 2026 – Present

- **Developed data pipelines for sensor-driven systems**, processing and integrating real-time sensor data to support reliable monitoring and decision-making across platform.
- Improved system **reliability, performance, and observability** by building backend workflows for real-time sensor ingestion and alerting, and debugging production issues to strengthen **monitoring at scale**.

Student Research Assistant, Business Intelligence Research Group (BIRG) – UNBC

Nov 2024 – Present

- Integrated an **LLM-based agentic module** into the DCGA platform to automate clinical care plan generation- designed a structured tool-use pipeline with schema-validated outputs, fallback handling, and a human-review flag for low-confidence generations.
- **Own three production platforms end to end** (Accessible UNBC, Biobank, DCGA) - engineered .NET 6/7 RESTful APIs and cross-platform Flutter mobile apps, applying clean architecture, JWT authentication, offline-first workflows, and wearable (BLE) integrations.
- **Designed and optimized SQL Server** relational schemas for large scientific datasets using indexing strategies(B-tree data structures), stored procedures, and data integrity enforcement to maximize query performance and maintainability.
- **Manage the AWS serverless infrastructure** (API Gateway, Lambda, S3, RDS, CloudWatch) with GitLab CI/CD pipelines for continuous deployment and **observability**; provide third-level production support and write the technical documentation across all platforms.

Technical Skills

Languages: Java, JavaScript, TypeScript, Python, SQL, C/C++

Frameworks & Libraries: .NET, Angular, Node.js, Flutter, LangGraph, LangChain

Databases: SQL Server, PostgreSQL, MySQL, Firebase

Cloud & DevOps: AWS (Lambda, API Gateway, S3, RDS, CloudWatch), Docker, GitLab CI/CD

Projects

Stock Market Prediction – Hybrid LSTM + LLM Forecasting System

- **Developed a time-series forecasting system** using LSTM models, applying structured feature engineering pipelines and presenting findings clearly to both technical and non-technical audiences.
- **Improved model interpretability using SHAP-based explainability**, enabling better analysis and supporting data-driven decision-making.

AI Job Application Assistant – Agentic Automation System

- **Built and shipped an end-to-end web automation system** (Python + Playwright) that plans, executes, and adapts multi-step workflows autonomously – planned design and implementation activities, estimated task effort, and documented components for maintainability.
- **Designed the modular system architecture** and improved workflow efficiency by **70%** through automation and optimized task execution; conducted thorough testing and troubleshooting throughout.

Education

University of Northern British Columbia, BSc in Computer Science

Sep 2023 – May 2027 (Expected)

- GPA: 3.97 / 4.4

Publications

ISG – International Society of Gerontechnology, Conference Abstract

W. Haque, S. Freeman, H. Fournier, V. Gami, D. Pandya. (2026). Wearable-Sensors-Enabled Real-Time Decision Support in Geriatrics. *Gerontechnology*, 25(s), 1-1.
